

# LID ON STORAGE BIN

N/ECH 234

HW 3.47

N/MILANO

P. 101

$$LID = 0.61\text{ m} \times 1.00\text{ m.}$$

AB FIXED ON X-AXIS

$$T_{DE} = T_{CE} = 66\text{ N.}$$

LINE OF ACTION for  $T_{DE}$  is thru pt. D.

?  $M_A$  due to  $\vec{F}_D$

THE FORCE ON D IS THE TENSION,  $\vec{T}_{DE} = \text{SPACE VECTOR}$

$$M_A = (\vec{AD}) \times (\vec{T}_{DE})$$

$$d_x = \sqrt{(0.61)^2 - (0.11)^2} = 0.6\text{ m.}$$

$$\therefore \vec{AD} = 0.11\hat{j} + 0.6\hat{i}$$

SINCE  $\vec{T}_{DE} = \text{SPACE VECTOR}$ , NEED UNIT VECTOR to find FORCE COMPONENTS:

$$\vec{DE} = +0.3\hat{i} + (0.71 - 0.11)\hat{j} - 0.6\hat{k}$$

$$|\vec{DE}| = \sqrt{0.3^2 + 0.6^2 + 0.6^2} = 0.9$$

$$\vec{T}_{DE} = \frac{0.3}{0.9}(66\text{ N})\hat{i} + \frac{0.6}{0.9}(66\text{ N})\hat{j} + \frac{0.6}{0.9}(66\text{ N})\hat{k}$$

$$= 22\hat{i} + 44\hat{j} - 44\hat{k}$$

$$M_A = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 0 & 0.11 & 0.6 \\ 22 & 44 & -44 \end{vmatrix} = \hat{i} [0.11(-44) - 0.6(44)] = -31.24\hat{i}$$

$$= -\hat{j} [0 - 0.6(22)] = +13.2\hat{j}$$

$$+ \hat{k} [0 - 0.11(22)] = -2.42\hat{k}$$

$$\therefore M_A = \underbrace{-31.24\hat{i}}_{M_x} + \underbrace{13.2\hat{j}}_{M_y} - \underbrace{2.42\hat{k}}_{M_z} = 34\text{ N}\cdot\text{m.}$$
